### 3.3 Limiting Strain Calculation

Allowable strain criteria for buried continuous pipelines

Strain component	Pipe category	Allowable Strain			
		Tension		Compression	
Continuous Oil and Gas pipeline	Ductile Cast Iron Pipe	2%		For PGD: Onset of wrinkling $\epsilon_{cr-c} = 0.175 \frac{t}{R}$ For wave propagation: 50% to 100% of onset of wrinkling ( $0.5\epsilon_{cr-c}$ to $\epsilon_{cr-c}$ )	
	Steel Pipe	3%			
Continuous water pipeline	Steel and Iron pipe	0.25 $\epsilon_u$ or 5%  =0.25×0.15 =3.75%		$\epsilon_{c-pgd} = 0.88 \frac{t}{R} = 0.88 \frac{0.006}{0.512/2}$	= 0.0206
				$\epsilon_{c-wave} = 0.75 \left[ 0.5 \frac{t}{D'} - 0.0025 + 3000 \left( \frac{PD}{2Et} \right)^2 \right]$ where $D' = \frac{D}{1 - \frac{3}{D} (D - D_{min})} = \frac{0.512}{1 - \frac{3}{0.512} (0.512 - 0.50)} = 0.55m$ $\epsilon_{c-wave} = 0.75 \left[ 0.5 \frac{0.006}{0.55} - 0.0025 + 3000 \left( \frac{0.5 \times 0.512}{2 \times 2 \times 10^5 \times 0.006} \right)^2 \right]$	= 0.00224

### 3.4 Check for Safety

Total strain for continuous pipelines should be less than allowable strain,  $\epsilon_{seismic} + \epsilon_{oper} \leq \epsilon_{allowable}$

Case		Maximum strain in pipe		Allowable strain in pipe		Safe/Unsafe
		Tension	Compression	Tension	Compression	
(1) PGD	Longitudinal	0.2078	0.2072	0.0375	0.0206	Unsafe
	Transverse	0.0485	0.0479	0.0375	0.0206	Safe
(2) Liquefaction		$3.2 \times 10^{15}$	$3.2 \times 10^{15}$	0.0375	0.0206	Unsafe
(3) Fault Crossing		0.0639	-	0.0375	0.0022	Unsafe
(4) Seismic Wave Propagation		0.0017	-	0.0375	0.0022	Safe

The pipeline is considered safe only when all the strain levels are within the allowable strain limits and appropriate retrofitting might to done to ensure safety.
